straight courses. Often, rabbits were caged at the finish line. In answer to protest against the use of live rabbits, in 1919 the mechanical rabbit was invented. Dog races were then run on oval or circular tracks with the “rabbit” being attached to an electric railing. A pack of six or more dogs are set loose from starting boxes to chase the rabbit. The dogs never actually catch the rabbit except by accident, as its speed is regulated with mechanical controls. In their attempt to overtake the rabbit the dogs show great speed, with the fastest dogs running close to 40 mph (65 km/h).

a person interested in what is real and practical rather than what is imaginary or theoretical.

reality

Reality of the past (“I”’s reception of the past agrees with the recorded data, and “I” agrees that it does). Reality of the present (“I”’s reception of the present agrees with the data impinging upon the organism from the environment, and “I” agrees that it does). Reality of the future (“I”’s concept of the future agrees with past and present data, and “I” agrees that it does). Reality between two people (they agree on something). Reality in a group (the majority in agreement). Physical, “actual” reality—the only kind considered by many people—is merely agreement between MEST conditions or life conditions and some person’s perceptions of those conditions. If these do not agree, we say that he does not know the reality (ours, that is, for we have only our own perceptions by which to judge the MEST conditions). There are emotions on the reality scale. One of them is shame.

(1897 - 1957) Austrian psychiatrist and social critic. Even before his graduation from the University of Vienna he began practice as a psychoanalyst and became influential in this movement. His practice expanded from Austria into Germany where, as a member of the Communist Party, he attempted to integrate his work as a sex counselor into the broader revolutionary movement. Reich's activities were suspect by the leaders of the Communist Party and, at the time of Hitler's assumption to power in Germany in 1933, he was forced to flee to Denmark. Later that year he was ousted from the Communist Party as a result of a work he published against official communistic doctrine. After attacks by other psychiatrists and the press he left Denmark for Sweden and a short while later went on to Norway. In 1937 his detractors reached him in Norway and he moved to the US and practiced there for many years. In the last years of his life, Reich showed little interest in psychiatry, devoting his efforts to discoveries in the field of physics. In 1956 he was sentenced to two years' imprisonment for disobeying a government injunction which the Food and Drug Administration had obtained against him, ordering destruction of all orgone boxes, his journals and books. He died while in prison a year later. See also orazone, psychiatrist and psychoanalyst in this glossary.

a standing wave of some kind or another or a mass composed of electrical particles. Where an outgoing flow has met an incoming flow and both are constant, you get a ridge. Example a fellow is standing at one side of the room with a deck of cards and another fellow is standing at the other side of the room with a deck of cards. These two start throwing cards, one at a time, at each other, more or less on the same channel. A few of those cards are going to collide in midair. And in the center of the room between those two people a bunch of these cards will accumulate. Even though lots of cards reach the other side of the room, some cards are going to be piled up in the middle of the room. You have, as a final analysis, a ridge.

Rigoletto	<p>the principal character in an opera of the same name, written by Italian composer Giuseppe Verdi (1813–1901) and first performed in Italy in 1851. The story is one of deceptive affairs, intrigue and treachery, and ends in tragedy. Rigoletto, the hunchback, whose name means clown or ridiculous one, is the court jester of a philandering Duke. At the beginning of the opera, Rigoletto is cursed by the character Monterone for making fun of his distress after his daughter has been ravished by the Duke. Rigoletto's scheme to protect his own daughter from the amorous advances of the Duke backfires, however, and despite Rigoletto's efforts, his daughter ends up falling in love with the Duke. After being kidnapped and seduced by the Duke she sacrifices her own life to save him from her father's hired assassins. The final tragedy of the opera is revealed when Rigoletto discovers that the sack he is carrying to throw into the river doesn't contain the corpse of his bitter enemy, the Duke, but instead, that of his beloved child. Roanoke	1. a reference to Roanoke Island, located off the northeast coast of North Carolina, USA, and the site of the first English settlements in North America. Roanoke became famous for the mysterious disappearance of a colony of 107 settlers in the late 1500s. They arrived on the island in 1587 to find it inhospitable and the local Indians unfriendly. A few years later a supply ship came to the island but the settlers had disappeared, virtually without a trace, and the exact fate of the colony was never discovered. 2. a city in Virginia, USA, on the Roanoke River. Originally settled in 1740, the city was named Roanoke in 1882. The small pioneer town eventually developed into one of the largest cities in Virginia, becoming an industrial center and producing railroad cars, metal and steel products, clothing, chemicals and furniture.

(A Royalist is a person who supports or adheres to a monarch, or government by such, instead of to an elected parliament, particularly in times of a rebellion or civil war.) The stronghold was called Callao fortress and it guarded the major seaport of Callao in west Peru. Although Peru was liberated from Spanish control in 1821 by Simon Bolivar, Rodil, who took over the fortress in 1824, refused to give up his position. Bolivar, tired of the war and desirous of getting on with reorganizing South America, offered generous terms for Rodil and his garrison, as well as amnesty to most of the 4,000 Royalist refugees secure behind the fortress walls. Rodil refused the terms of peace, however, with savage indifference, sending the first courier of peace back to Bolivar with the peace terms pinned to him with a knife. Bolivar then engaged in what seemed to be an endless siege to the fortress with much loss of life on both sides. Again Bolivar offered peace to Rodil, only to be refused and the siege continued. The siege wore on and Rodil held the fortress until he was finally defeated in 1826.

Roman Empire	<p>an ancient empire established in 27 b.c. and centered at the city of Rome, in what is now Italy; the most extensive civilization of ancient times. During the time of the Roman Empire, the whole Western world became subject to Rome and was at peace for roughly the first four centuries a.d. As the years passed, the empire was divided into eastern and western portions, developed internal weaknesses, was invaded by outside tribes and eventually ceased to exist in a.d. 476. After the fall of the empire, Europe entered into a period of cultural decline known as the Dark Ages, characterized by intellectual stagnation, widespread ignorance</p>

Roman-Britain	<p>of Britain from the time it was invaded by Rome around A.D. 43 by the Roman general, Plautius, until the Roman occupation ended early in the fifth century. Plautius brought an army of 40,000 men whose discipline, arms and skill overwhelmed the native population and made Britain a Roman province. Particularly in what is now the south of England, the Romans established schools, spread the use of Latin and encouraged cities and rich men to build temples, public baths and houses with stone foundations and tiled roofs. In the main city, called Londinium (now London), interiors of the homes followed the Roman style, with patterned floors, large bathrooms and mural walls. Most manufacturing was carried on in homes and small shops. Farming and sheep-raising were the principal occupations along with mining, chiefly of silver and lead. Brisk trading occurred because the entire area was linked together by a network consisting of 5,000 miles of roads. By the end of the fourth century, however, the Romans were occupied fighting battles in their outlying areas and it became increasingly difficult to maintain troops in Britain and they abandoned the island at the beginning of the fifth century. And they were good civilizations as they went the Roman-Briton civilization, the Danish civilization that was here, the Saxon civilization here-all these things terribly different-the Norman civilization that was here.</p> <p>Britain from the time it was invaded by Rome around A.D. 43 until the fifth century. The irregularly shaped stone stands 3 feet 9 inches high (114 cm) and 2 feet 4 1/2 inches (72 cm) wide. It was erected in 196 B.C. near Rosetta and bore a decree praising the Egyptian king of that time. The stone was engraved in three different languages, the top section in hieroglyphics (writing with pictures and symbols), the middle section in the language common to the people at that time and the bottom section in Greek. By using the Greek version, scholars were able to translate the other two languages. From this, other Egyptian hieroglyphic writings could be translated for the first time. the British navy, that part of the military organization of the United Kingdom given the responsibility of national defense at sea, protection of shipping and other naval duties. Organized sea power was first used in England before the thirteenth century for local defense, such as repelling invaders. Two centuries later, Henry VIII (King of England, 1509–1547), built fleets of fighting ships, armed with large guns, and set up an organization to administer these fleets. Under the rule of Queen Elizabeth I (1558–1603) the navy became England's major defense and means by which the British Empire extended its reach around the globe. By the mid-1600s, Britain had established itself as the leading sea power of the world. The Royal Navy commanded every ocean on the globe and contributed to a long period of relative peace amongst European nations. It remained the world's most powerful navy well into the twentieth century. After participating in World Wars I (1914–1918) and II (1939–1945), it was second in size only to the US Navy and continued to be a world leader.

a famous cathedral in London, England, and one of the most well-known churches in the world. A cathedral is a large and imposing church which is the seat of a bishop (a superior ranking member of the Christian clergy having authority over other clergy and who supervises a number of local churches in his district). Saint Paul's Cathedral was designed by renowned British architect and mathematician Sir Christopher Wren (1632– 1723) who modeled the cathedral after Saint Peter's Church in Rome. Built between 1675 and 1710, it was opened for service in December, 1697, while still under construction. English composer and organist Maurice Greene (1696–1755) was one of the first to play the cathedral's pedal organ. (A pedal is a foot-operated lever used to modify the sounds of certain types of organs.) Like most cathedrals it is shaped like a cross (as seen from above). With a huge dome topped with a cross it rises to over 360 feet (110 m) in height. The interior is chiefly decorated in marble and along its walls are many tombs and monuments, mostly of famous naval or military figures. It covers a total of 60,000 square feet (5,574 square meters) and is one of London's major landmarks. The name Saint Paul's has also been used to name other churches around the world.

Due to repeated revolutions, the United States established a provisional government there in 1914. However, in April 1916, the Dominican Republic minister of war attempted to overthrow the president of the Dominican Republic, and the US landed marines at several ports to repress internal disorders. A new treaty was requested by the US to collect customs under American control, to appoint a financial advisor and to establish a peace-keeping force officered by Americans. The new president of the Dominican Republic refused to agree to these conditions as they violated Dominican sovereignty. In retaliation, the US refused to turn over to the Dominican government its share of the customs revenues and in November 1916 announced that the Dominican Republic was under United States military administration. There was great resentment against this US military rule, but the American occupation forces remained until September 1924, when the Dominican Republic adopted a new constitution.</p> <p>capital of the Dominican Republic, a country on an island in the West Indies.</p>

Sawyer, Tom	the main character in the novel <i>The Adventures of Tom Sawyer</i> , written in 1876 by American author, Mark Twain (1835–1910). The novel tells of Tom's life with his Aunt Polly, and of the great mischief he gets into. In one episode, for example, Tom is being forced to take medicine by his Aunt Polly and instead of taking it, he secretly feeds it to his Aunt's cat. The cat reacts crazily to the medicine, jumping and zooming around the room creating chaos, which is witnessed by Aunt Polly. Tom tries to explain how he does not know what is wrong with the cat, but is soon found out. The book also relates the adventures Tom has with his runaway friend, Huckleberry (Huck) Finn, such as finding a ghost in a haunted house (the ghost turning out to be two criminals hiding treasure), witnessing a murder and attending their own funerals when the people of the town think them dead. <i>The Adventures of Tom Sawyer</i> is the first in a series of four books telling of the two boys' adventures.

Scientology	an applied religious philosophy developed by L. Ron Hubbard. It is the study and handling of the spirit in relationship to itself, universes and other life. The word Scientology comes from the Latin scio, which means “know” and the Greek word logos, meaning “the word or outward form by which the inward thought is expressed and made known.” Thus, Scientology means knowing about knowing.

comes from the Latin scio which means “know” or “distinguish,” and the Greek word logos which means “reason itself” or “inward thought.” It means knowing how to know. Scientology is fully defined as the study and handling of the spirit in relationship to itself, other life, universes and, ultimately, the Supreme Being. I would like to be very definite about Dianetics and Scientology At no time should you infer, even vaguely, that we are talking about psychology.

Scotland Yard the general term for the headquarters of the London Metropolitan Police, situated in central London, England. Founded in 1829 by Sir Robert Peel (a British statesman) Scotland Yard (more properly referred to as the Criminal Investigation Department (CID) that branch of the London police which handles all aspects of criminal investigation in metropolitan London) is the most famous police organization in the world. In addition to the above actions Scotland Yard also keeps extensive files on all known criminals in the United Kingdom. The original location of these headquarters was situated on the site of a 12th century palace used for visiting Scottish royalty and, as a result of this the police facilities became known as Scotland Yard, (a yard is an area, usually uncultivated, which adjoins a house or other building, specifically an area which is surrounded by walls or buildings within the precinct of a castle, house, etc; a court) and is now known informally as "The Yard." The word "secretarial" applies to the signature, meaning it was signed as official by a person other than LRH personally. It is the written initials in the lower left-hand corner that are "secretarial." The system came into use to accommodate cable orders originally. By being sealed and initialed by an official person like a notary public in the org, the validity of the order was attested as a valid order of LRH. A Sec ED was a secretarially signed order of the Executive Director, valid for one year. Issues were numbered consecutively for area or zone. Also called Secretarial Executive Directive.

the head of the US Department of State (also known as the "State Department") which is responsible for making and conducting foreign policy, i.e., relations between the US and foreign nations. It is the oldest department in the United States government and its activities include negotiating treaties, receiving foreign diplomats, directing US diplomats in other countries, coordinating correspondence from foreign nations and administering economic aid to developing nations. The secretary of state's overall responsibility is identifying the major international problems the US faces and developing the strategy to deal with them. This post is appointed by the US President and is one of his chief advisors. When the post was first held in the late 1700s and early 1800s, it often served as a stepping stone to the presidency. Thomas Jefferson, for example served as (the first) secretary of state before being elected the third president of the United States. - seven mattresses of the princess, the a reference to The Princess and the Pea, a well-known story by Danish author Hans Christian Andersen (1805–1875). The Princess and the Pea tells of a prince who insists on marrying a real princess. Upon failing in his quest to find one, he returns home. During a storm, a girl appears at his door claiming to be a real princess. The prince’s mother puts the girl to the test by burying a pea under a large stack of mattresses (the amount of peas and mattresses varying with different versions of the story). The theory being a true princess will be so delicate the tiny lump under the mattress will keep her from sleeping. If she cannot fall asleep, she passes the test. The girl goes to bed and when asked the following morning how she slept the girl confesses she hardly slept at all due to the lump in her bed. She thus passes the test and marries the prince.

Shicklgruber

another name for Adolf Hitler, Nazi dictator of Germany from 1933 to 1945. Hitler's father, Alois (born 1837), was illegitimate and for a time bore his mother's name, Schicklgruber, but by 1876 he had established his claim to the surname Hitler. Adolf (born 1889) never used any other name, and the name Schicklgruber was revived only by his political opponents in Germany and Austria in the 1930s. During his late teens and early twenties, Hitler avoided common labor (as he believed himself to be an artist) but earned small sums selling tinted postcards, making watercolor pictures and working as a house painter.

shift gears

change one's method or approach in handling a problem. Gears are wheels having teeth that fit into the teeth of another wheel of the same kind. If the wheels are of different sizes, they will turn at different speeds. The expression shift gears refers to the fact that some engines (such as car engines) contain sets of gears that are used to increase and decrease the speed of the engine in relation to the speed of the wheels. This makes it possible to keep the engine running at its most efficient rate while allowing a large range of speed. When a car is shifted to a higher gear, it can move faster without putting strain on the engine; lower gears make it possible for the car to move more slowly. There's two fields of terminology and when you get to be a real pro in the field of the organ, where you're an organ designer as well as performer, you know, real upscale, you actually shift gears on terminology and the organ terminology with which you're familiar is the organ terminology which is referred to by the musician, the normal musician.

They're all over the shop. ⇐Studying Introduction (18 June 64)</p> <p>(informal) scattered about the place, spread out in every direction; following an erratic and undefined course; in a state of confusion. The exact origin of the phrase ``all over the shop" is unknown, but it likely comes from a slang term in the late 1800s, used in boxing, ``to knock him all over the shop." (A ``shop" being usually a place of business or a place where one's ordinary occupation is carried out. ``Shop" in this sense meant the boxing ring, or the place in which the ``work" of boxing is done.) When a fighter was ``knocked all over the shop," he was knocked all over the ring, knocked against the ropes at the side of the ring and knocked into a confused state. Hence ``all over the shop" came to mean ``spread out everywhere and scattered in every direction, in a state of confusion or disarray." short axis n. a term describing a condition of the eye in which the distance from the opening in the front of the eye to the back wall of the eyeball is too short, thus causing poor vision. (An axis is the line straight through the middle of an object, such as a straight line from the object of vision to the back of the eyeball.) The eyeball is similar to a camera. The front of the eye lets in light, which arrives as random and scattered rays. These rays are directed and brought together at a certain point by the lens, forming a clear image on the back wall of the eyeball, similar to the way a photographic image is projected on a screen. The back wall of the eyeball must be a certain distance from the lens so that it receives the light at the exact point where the image focuses. If it is too near to the lens the light will hit it before the image has had a chance to focus and it will look blurry.

Siberia Bill

a reference to the Alaska Mental Health Bill, a formal document proposed in the mid-1960s to the United States legislature to enact as a law. The Siberia Bill proposed that a Siberian-type camp be created for mental health patients in a remote part of Alaska, a region much like Siberia. The bill proposed a “simplified commitment procedure,” allowing any peace officer, friend, medical doctor and of course, psychiatrist, to start commitment proceedings on a person. It was worded in such a way that any man, woman or child could be seized off the street and transferred without trial to this Siberian-type camp. The Church of Scientology along with other civil rights groups joined forces to fight this proposal from becoming law. A campaign was launched to inform the public of what was happening. This, along with a massive letter-writing campaign which inspired political opposition, succeeded in stopping the commitment section of the bill, leaving merely an act to authorize mental health funding to the territory of Alaska.

a nickname for the Alaska Mental Health Act, introduced in the US Congress in 1955. LRH called it the Siberia Bill because under its provisions any man, woman or child could be seized without trial and transferred to the million-acre mental-health facility which was to be established in Alaska, thus creating a Siberia (a northern region of the USSR and traditional place of exile for Russian criminals) in the US. This bill was defeated.

simultaneous equations two or more equations used together in the same problem and having unknown quantities of the same value. Equations are statements of equality between two quantities, as shown by the equal sign (=).

(mathematics) two or more equations containing variables for which the same values can make each of the equations true. An equation is a statement of equality between two quantities; for example, $2x + y = 1$, where x and y represent numbers. In order to solve this equation, one would figure out which numbers inserted into the formula would give the correct answer. In this case, if x stood for the number 2 and y stood for 3, the equation would be true $2 \times 2 + 3 = 1$. Thus, $x = 2$ and $y = 3$ would be a solution of the equation. Simultaneous equations are equations that are satisfied by the same solution. For example, the solution for both $2x + y = 1$ and $x + 2y = 8$ is $x = 2$ and $y = 3$. You get simultaneous equations, of all things, in calculus, and this is supposed to explain something.

Singer a reference to the Singer Company, a major American corporation which grew out of a sewing-machine business established in the mid- 1800s. The company was originally run by the inventor of the first practical sewingmachine for domestic use, Isaac Singer (1811–1875). It soon expanded to be the largest sewing machine maker in the world. In the 1960s, Singer embarked on a strategy to diversify, buying twenty-two different manufacturing firms with products ranging from household appliances to defense systems. This proved unsuccessful, however, and the company soon began eliminating many of its new operations. It also eventually abandoned the sewing-machine business, once its most remunerative operation, and continued in the electronics and defense systems fields.

slough of despond	<p>a condition, state or period of extreme discouragement or depression. A slough is a piece of land that has soft, muddy ground, especially a place in a road that heavy vehicles and horses cannot pass due to it being filled with mire, wet mud, etc. Despond is a state of dejection or loss of spirit due to losing hope. This phrase comes from a book written by English author and minister John Bunyan (1628–1688) called Pilgrim’s Progress. The story tells of the spiritual life of man and of its hero Christian who is traveling through the world to reach the Celestial City (signifying Heaven). Early in his travels he must pass through a deep bog called the Slough of Despond. After entering the bog he loses heart and cannot escape due to the burden of sin he carries on his back. He is eventually rescued, however, by a character named Help. He then continues on his way overcoming the other remaining obstacles and is successful in his journey.</p> <p>any serious depression or discouragement. From Pilgrim's</p>

(470?-399 b.c.) Greek philosopher of Athens who taught of truth and virtue. His philosophy concerned the character and conduct of human life, and he is remembered for his advice, "know thyself." Socrates never put his own ideas in writing; they are expressed in the writings of his student, Plato.

(470?-399 B.C.) Greek philosopher and teacher who is generally regarded as one of the wisest men of all time. He drew forth knowledge from his students by pursuing a series of questions and examining the implications of their answers. He looked upon the soul as the seat of both waking consciousness and moral character.

(470?-399 b.c.) Greek philosopher. He left no writings of his own; his philosophy was made known through the writings of his disciple Plato. His doctrines are the basis of idealistic philosophy, and have profoundly influenced philosophic thought through succeeding centuries.

Sodom and Gomorrah two cities in a story from the Bible which were destroyed by God with a rain of fire and brimstone (sulfur) as punishment for the sins and wickedness of its citizens. Before the destruction, God said he would spare the cities should ten decent men be found in all of Sodom. Two angels in the form of men found only one, Lot, and transported him with his wife and daughters to the countryside beyond the city. They were told to flee and were warned not to look back at the city. Paying no heed to the warning, Lot's wife looked back and was turned into a pillar of salt. The location of these two ancient cities is said to be submerged beneath the southern part of the Dead Sea, in southwestern Asia.

Spirit of St. Louis	the name of an airplane that in May of 1927, made the first solo nonstop flight across the Atlantic Ocean. The plane was piloted by American aviator Charles Lindbergh (1902–1974). A prize of \$25,000 was offered to the first aviator to fly nonstop from New York, USA, to Paris, France. Lindbergh persuaded nine businessmen from St. Louis, Missouri, to help him finance the cost of the plane which was modified to his specifications. Despite only having direct vision through a side window, having to rely on a periscope to see straight ahead and having no radio, Lindbergh successfully completed his flight covering 3,610 miles (5,810 km) in 33 1/2 hours. The flight gained Lindbergh immediate international fame and he was honored with awards, celebrations and parades. Shortly after his flight he published a book about his adventure and again in 1953 he published a second book entitled The Spirit of St. Louis, which gave an expanded account of his 1927 transatlantic flight.

SS Constitution a United States passenger steamship, launched in 1950, measuring 683 feet (208 m) in length. As originally built, the ship carried 1,000 passengers and traveled the Atlantic. However, by the mid-1960s, Trans- Atlantic trade had drastically declined for all steamship lines and from 1968 until the early 1980s the Constitution was out of commission. Put back into service as a Hawaiian cruise ship, she remained in use until the late 1990s. In 1997 while on her way to a scrapyard in the Far East she started taking in water and sank in the Pacific Ocean.

star-sight

an observation of a star taken with a navigating instrument to determine an exact position or direction. Well, it's true that they've evolved simpler methods of taking star-sights . . .

≡Study and Intention (18 Aug. 66)

an observation of a star taken with a navigating instrument. When navigating ships, one of the methods of finding one's location is through the use of heavenly bodies (such as planets and stars). At sea a navigator uses a special piece of equipment through which he looks at stars and measures their positions in relation to the horizon (the line where the sky seems to meet the earth). After taking several of these sightings, the navigator is able to calculate the position of his ship on the earth. Well, it's true that they've evolved simpler methods of taking star-sights, but their textbooks are so complicated that the first time I ever picked up a copy of the Naval Academy textbook on navigation, Dutton, I read the first four sentences, I read them again; they still didn't make any sense.

n. an observation of the position of a star, taken with a navigation instrument. In navigating, as on a ship, one uses the position of heavenly bodies to determine one's location. A star-sight is done with an instrument called a sextant, which allows one to observe and calculate exactly how high a star is in relation to the horizon and thus work out the ship's location.

starting bar	<p>n. a metal bar on motorcycles, which sticks out on the side of the engine, and which is used to start the engine when pushed down by the foot of the rider. On older motorcycles the rider forcefully pushed the starting bar down with his foot and then turned the spark on (meaning to activate the mechanism, which provides a spark to ignite the fuel inside the engine). If the spark was on when the bar was kicked down, it could ignite the fuel sooner than expected and the engine could start, causing the bar to forcefully fly back up to its starting position. Electric push-button starters have since become common, largely replacing the starting bar.</p> <p>on older motorcycles, a metal bar which stuck out on the side of the engine. sulfathiazole	<p>n. one of a family of medical drugs containing sulfur dioxide (a colorless, nonflammable gas that is used for such purposes as disinfecting, manufacturing chemicals, preserving fruits and vegetables, and making drugs). Knowledge of the benefits of drugs containing sulfur dioxide (known as sulfa drugs) dates back to the early 1900s. It was not until the 1930s, however, that the medical possibilities of such drugs were studied sufficiently to permit their broad application in medicine. As one of the earliest sulfa drugs to be put into general use, sulfathiazole proved powerful in retarding the growth of certain bacteria and was administered for such infections as venereal disease. It could be injected as a solution, taken by mouth, or applied locally as a powder or ointment. Sundays, long day of a humorous variation of a month of Sundays meaning an indeterminately great length of time.

Sundays, month of an indefinitely great length or period of time; practically never. The origin of this phrase is uncertain though it may come from the fact that in older times (the 1800s, when this phrase originated), Sundays were days where, for a "well-brought up" person, no games were played and no flippancy was allowed. For one who was very spirited (like a young person or child) these days seemed to drag out and go on forever. Thus a month of Sundays (thirty of them) would truly be a long time for such a person.

Swift, Jonathan (1667–1745), English poet, satirist, political writer and clergyman, also known as Dean Swift, from his post as dean (head clergyman) of St. Patrick’s Cathedral in Dublin, Ireland. Swift, along with other writers of his time, was concerned with the rate at which the English language was changing and whether his works would still be intelligible in years to come. In an effort to resolve this he submitted a proposal to the Earl of Oxford entitled “A Proposal for Correcting, Improving and Ascertaining the English Tongue.” In this proposal he complained about the imperfections of the language and stated in many instances it offends against every part of grammar. His solution was to set up an Academy for English, although this never got off the ground. During his life, he also wrote many works including Gulliver’s Travels which tells of the voyages of a ship’s doctor, Lemuel Gulliver. Additionally, he wrote a considerable number of poems, one of which (entitled On Poetry), reads in

Szondi a “test” invented by a Hungarian psychiatrist Lipot Szondi (1893–1986), in which a person is shown a number of pictures of mental patients (who are known to be psychotic or sexually deviant in some way). The testee is told to choose which pictures he likes the most and which he likes the least. The basis of this test, Szondi asserted, was that a person would select a picture of someone most like himself, and thus supposedly reveal the “disorder” he was suffering from.

(psychology) psychological testing involving the use of pictures of known psychotic types. The subject is asked which picture he likes the least or most. His responses are correlated then with the responses of psychotics represented by the liked pictures.

The origin of this term is uncertain, however, in one account it is thought to have originated in the 1500s from the board game backgammon, priorly known as "tables." The rules of the game are complex; however, under certain circumstances in the game a player can double the stakes and a dramatic reversal of fortune can occur thus placing the good fortune of one player onto the opponent. In another account it is said to have come from the practice of reversing the table or board in any board game and thereby switching the opponent's position.</p> <p>(informal) change a situation so that one gains a position of advantage (over one's opponent or enemy) after being at a disadvantage. tacks, get down to	<p>a coined variation of get down to brass tacks, meaning to concern oneself with the most important, essential business, the basic fundamentals of a situation; to arrive at the most significant point. Although the origin of this term is uncertain it possibly comes from the fact that countertops in general stores were once marked with brass tacks one yard apart. The storekeeper could then easily measure pieces of cloth, etc. when he sold it. Thus when he got down to brass tacks he was measuring exactly rather than estimating.</p> <p>a variation of get down to brass tacks meaning to begin the most important work or business; get started on the most important things to talk about or know. Technirama a trademark for a system of filming and projecting motion pictures that employed special lenses and projected a film on a wide screen. Technirama was introduced by Technicolor Motion Picture Corporation and used in the 1950s and 1960s. It consisted of a camera fitted with a special lens that took a wide picture and condensed it (“squeezed” it) so that it fit onto the motion picture film. When the final film was presented to an audience, a special lens on the projector expanded the picture back to the correct proportions so it could be viewed on a wide screen.

Teen, Harold the lead character in a comic strip of the same name which ran in the newspapers from 1919 to 1959 and characterized the life and customs of a typical seventeen-year-old teenager, who lived with his parents. The comic strip showed Harold going through life, changing with the fashions and rapidly realizing the problems of adulthood. The strip appeared for 40 years, with the 1920s being its most popular period. It ran in newspapers, was adapted to radio and was even made into a movie. In the 1950s, however, its popularity declined and in 1959 when Harold Teen’s author, Carl Ed, died so did Harold Teen.

Teller Dr. Edward Teller (1908–) Hungarian-born American physicist, whose work in nuclear physics helped develop the hydrogen bomb. During World War II (1939–1945) Teller joined the effort to develop a nuclear weapon and worked on the Manhattan Project, a wartime project, headed by American nuclear physicist, J. Robert Oppenheimer (1904–1967), established in the US for the development of the atomic bomb. Following the war, in spite of the effects of the first atomic bomb as seen in the bombing of Hiroshima, Teller continued to push for development of an even more powerful bomb. In 1952 the first hydrogen bomb was tested in the Pacific Ocean; its explosion was equivalent to 10 million tons of TNT. Teller became known as the “father of the H-bomb.”

theta pole a type of theta trap made up of a piece of metal or other material which, when a thetan begins to push against it, absorbs his energy and pulls him in harder. The really effective ones have no energy of their own at all but only use the energy of the thetan himself. The more he pushes, the more he is stuck to the trap, because it is on his wavelength, it's his energy. He could postulate himself off of the trap, but this thetan has lost the power to postulate and thinks the smart thing to do is to push the trap away from him. It is not unusual for a thetan to spend 18 to 20 thousand years on one of these traps.

This Is Your Life the title of a television program popular in Britain and America during the 1950s. The show opened with the host surprising an individual either in the studio or close by and informing him or her that “this is your life.” The guest was then taken to the studio where the story of his life was presented. The host would read the guest’s This Is Your Life book recounting his life chronologically. Periodically an offstage voice would be heard and the featured guest would try to guess who it was—a teacher, a relative, a friend, etc., who would then appear to reminisce about their shared experiences. The whole life story was covered in this manner. The subjects of the show varied from famous celebrities to businessmen, to ordinary people. Beginning in 1952, the show originally aired for nine seasons until 1961. It appeared again in the 1970s and in the 1980s combining new programs with reruns of older shows.

a semidocumentary-style television show of the 1950s and early 1960s, in which the lives of show-business personalities who appeared as guests were relived through the testimonies of friends and family.

Tides are the rise and fall of the ocean waters of the earth. These are primarily caused by the moon's gravitational attraction or pull on these waters as it revolves around the earth. (The sun also exerts a pull on the earth, but this is less than the moon's due to its greater distance from earth.) The effect of such tidal changes are most important where oceans meet land masses, as the rise and fall of the water can affect the ability of ships to pass through normally shallow water, the ability of waste and sewage to be carried out to sea from a harbor during the movement from high to low tide, etc. Because the movement of the sun and moon are predictable, the tides can also be predicted. Thus the tides for each upcoming year are figured out and published in tables, arranged in columns on a page. These tables are published in different editions by different countries. In the US, for example, the National Ocean Survey (a government agency which maintains various stations throughout the US and other areas to observe and measure the tides) annually publishes Tide Tables. These list tides for approximately 172 principal ports of the world and 4,900 supplemental ports. time and motion study n. LRH def. look over the period of time from a viewpoint of time and motion. This is to answer the question “Are things arranged so that there is no time wasted in useless motions which are unnecessary?” This includes poor placement of materiel on a flow line or tool sheds five miles from the site of work so that one has to go there every time one wants a hammer, out-of-sequence flows or waits. One counts up the amount of wasted time simply because of the disorganization of a place. It isn’t enough to say a place is disorganized. How is this disorganization consuming time and motion which is not resulting in a higher quantity of production? Examples of this are quite gross. When you have done this study, during which you have made notes, you will have the raw materials necessary to make an estimation of the area.

The men had banded together to protect their meager wages, but were convicted of “administering unlawful oaths.” This charge was from the practice of initiating new members of their trade union with a ceremony. Although the exact details of the ceremony are not known, it is believed that initiates entered a room blindfolded, were read to from the Bible, which they then kissed, and took an oath not to reveal the union’s members or activities. They were then briefed on the rules and regulations, which included a membership fee that assisted workers on strike. The men’s conviction and sentence caused an immediate and large public reaction in England, especially in London, and the men became local heroes. The government at first ignored the public reaction; however, two years later in 1836 their sentences were cancelled.

- torsional G space n. LRH def. You’ve got an xyz coordinate there. (See illustration) Now, there’s no reason at all why we can’t have space that looks this way. That’s the z coordinate and that is the y coordinate and that is the x coordinate and this is the G coordinate. And back thisaway—we get more complicated space now—back thisaway from the point of origin we always have a spiral. And that’s twisted space when viewed backwards from the point of origin. This would merely be a fixed point of origin, a more fixed viewpoint. You would say the forward look in this space gives you this picture, and objects which are in that conform to that pattern and are distorted to that degree; and back of this there is a negative viewpoint and everything just all sort of twists away. Once upon a time you probably made a lot of experiments with this sort of thing. Space is terribly interesting in that it is— well, this is, by the way, torsional G space. And that is—it would be the general viewpoint, I’m sure, taken by the “torsional” people. You’ve seen

doing calculations regarding this set in relation to other sets of infinite size (e.g., the infinite set of whole numbers), transfinite cardinals could be used. Transfinite means going beyond or surpassing the finite.

(mathematics) symbols used in mathematics for making calculations with different sets of numbers, where the sets are of infinite size. For example, a mile can be divided into intervals—1/2 mile, 1/4 mile, 1/8 mile and so on. The number of possible intervals in that mile is infinite, thus creating an infinite set. In doing calculations regarding this set in relation to other sets of infinite size (e.g., the infinite set of whole numbers), transfinite cardinals could be used. Treasure Island a novel written in 1883 by Scottish novelist and poet Robert Louis Stevenson (1850–1894). The story is told by a young boy, Jim Hawkins, who lives with his mother in an inn in England. Hawkins discovers a secret treasure map belonging to a lodger at the inn. When a band of sinister men try to obtain the map Hawkins outwits them and secures the map and with two friends sets sail for Treasure Island to find the treasure. Among the ship’s crew is the notorious one-legged pirate Long John Silver who, along with his men, is after the treasure for himself. Long John Silver with his crew plot to seize the ship, kill the party and get the treasure. However, Hawkins hears their mutinous plot and, after a series of thrilling adventures and fights, foils their plan and secures the treasure. Treasure Island was Stevenson’s first and most famous novel.

triangle of balls	<p>a reference to the triangular starting formation of fifteen colored balls used in the game of pocket billiards (also called pool). There are many versions of the game; however, generally it is played with 15 consecutively numbered balls and a white ball (called the cue ball), the object being to pocket more balls than one's opponent. One pocket is located at each corner of the table with two in the middle of the two longer sides. The thick, slate tabletop is covered with green felt and has cushioned edges against which balls can carom. Using a leather-tipped cue stick (the word billiard comes from the word stick or wood), the game is commenced by a player striking the cue ball, at one end of the table, into the numbered balls (placed tightly together in a triangle) at the other end of the table. The resultant impact (called the "break") disperses the balls and driving balls into the pockets</p>

two out and runners on	first, second and third and being caught out a reference to the game of baseball where a team is forced to give up a good chance of scoring. In baseball, to score a point a player must hit a ball, run around three bases and return to where he began (called home base). A player may only make it to the first, second or third base after a hit. Another player can then hit the ball and the player standing on one of the bases can continue running around the remaining bases and back to home base to score. If a player hits the ball and the other team catches it, the player is out of the game. Once there are three "outs," the other team gets a chance to

hit the ball and score points. In a situation where there are players on all the bases, there is a good chance of scoring several points if the player hitting the ball does well. If, however, the ball hit by the player is caught by the opposing team, and there are already two outs, the team loses any chance they had to score in that round of play.

(baseball) in a position where one has just lost his team's chance to score any further points or has just lost the game. In the game of baseball, there are four “bases” called first, second, third and home, laid out in a diamond shape, which players have to run through and touch in sequence in order to score points. The objective of the offensive team is to get players onto and through each of the bases, and the defensive team's aim is to prevent them. Specific actions on the part of the defensive team count as “outs” against the offense, and when the offense has accumulated three “outs,” they become the defense, giving the other team a chance to score points. Thus, having runners on first, second and third would be a potential of three points which could be scored, but with two outs, one more out would mean the loss of that potential.

The gas has numerous uses plants use it to survive, it is used in soft drinks, sparkling wines and beer to give the beverages their “fizz,” and it is used in fire extinguishers (it does not burn and is heavier than air, thus enabling it to blanket the fire and prevent oxygen from reaching the fire). CO₂ has also been used by psychotherapists as a “therapy.”

A block is a casing, usually of wood, commonly found on vessels of all sizes and used to facilitate the working of ropes and lines. The block increases the mechanical power applied to ropes by their use in various combinations. A block and tackle is a system of blocks and ropes used for hauling or lifting heavy objects. The greater number of blocks in a block and tackle, the more weight that can be lifted. When the pulleys of the system come together, lifting power is lost and the only alternative is to lower the weight.

two-way switch	a coined term meaning in its most general sense, a betrayal, the cheating or swindling of someone with whom one is associated, as by breaking a promise or violating an obligation. A two-way switch more specifically can mean a situation where a person betrays two sides; that is, the side to which he owes his allegiance and the opposing side. An example of this is when a boxer or a racer secretly agrees to lose a fight or race, but then without warning changes his mind and tries to win or wins in the last moment—the first betrayal is agreeing to lose the fight or race (a betrayal of his own side) and the second betrayal is when he decides not to (a betrayal of the opposing side he made the secret agreement with).

V-12	an engine that has twelve cylinders situated in a “V” shape (six on each side). In the operation of certain engines, a fuel and air mixture is injected into a cylinder containing a piston. The mixture is ignited, resulting in an explosion (combustion) that forces the piston downwards. As the piston is connected to a crankshaft, the downward motion is made circular. This rotary motion is then transferred through various connecting pieces to other parts, such as wheels of a car or the propeller of a ship. The V-type mechanical design results in an engine that is more compact than an engine with the cylinders arranged in a single line. Having twelve cylinders also allows for more power and smoothness than provided by an engine with only six or eight cylinders.

the last name of two famous Flemish painters--Hubert van Eyck (circa 1370--1426) and his brother Jan (1385?--1441). The word Flemish means a resident of Flanders, a medieval country in Western Europe including parts of what is now Belgium, France and the Netherlands. The brothers are most famous for a large altarpiece which they painted for a cathedral in Flanders, called "The Adoration of the Lamb" ("the Lamb" is a Christian term for Jesus Christ). This was reportedly started by Hubert and completed by Jan. The work had a great influence on painting in Northern Europe because of its detail, brilliant colors and religious spirit. The van Eyck brothers enormously improved the technique of oil painting and are considered the greatest of the Flemish painters. velvet glove in a mailed fist	a coined variation of the phrase iron hand in a velvet glove, meaning absolute or inflexible firmness concealed by mildness or gentleness in approach. Mailed means clad in mail, a flexible defensive armor consisting of small, interlinked metal rings or chain-work. The phrase iron hand in a velvet glove contrasts the hardness of iron with the softness of velvet. It is referenced in one of Scottish historian Thomas Carlyle's (1795– 1881) works where he states, "Soft of speech and manner, yet with an inflexible vigour of command ... 'iron hand in a velvet glove,' as Napoleon defined it." Thus, it appears Napoleon Bonaparte (1760–1821, French general and emperor) originated it." The phrase, however, has also been attributed to other rulers.

one of the three principle deities in Hinduism, a religion of India that emphasizes freedom from the material world through purification of desires and elimination of personal identity. Vishnu is the preserver of the world, while the deity Brahma is the creator and the deity Siva is the destroyer. Vishnu is portrayed as having four arms. In two hands he holds a club and a discus (a sharp round disc used as a weapon), and in his other two hands he holds a conch shell and a lotus flower. These objects have been variously interpreted to mean different things, for example, the shell (which can be blown upon to make a sound) is the sign of battle; the disc is symbolic of a weapon which can be used to kill demons; the lotus of his creative power; the club is symbolic of physical power and punishment of the wicked. Vishnu is dressed like a king and has a jewel-studded crown. Vishnu is believed to have sent his will to the world through men who were heroes. waiting for something to turn up a reference to a philosophy of life as displayed by the character Mr. Wilkins Micawber, from the well-known nineteenth century novel David Copperfield by English author Charles Dickens (1812– 1870). The novel portrays the story of a young man, David Copperfield, who, by using his skills and hard work, leaves the lower middle class and becomes a famous writer. Micawber, a friend of Copperfield's, comes up with many ideas to bring about wealth, and although his endeavors fail, he never gives up and remains certain something will "turn up." The phrase thus came to refer to someone who is expectant that luck will change or good fortune will arrive without much effort of their own.

a transparent yellow sheet of glass or plastic-like material placed in front of or behind a camera lens to control the transmission of specific colors of light onto the film. Although light appears to be white, it is actually a combination of different colors. These colors can be broken down into three "main" colors--red, green and blue. When these three colors are added together, they make white light. When one of these colors is taken away, the two remaining colors combined make a different color than white. For example, red and green combined together make yellow; and red and blue combined together make magenta (a purplish color). A yellow filter looks yellow to the eye because it allows red and green light to pass through it freely which is perceived as yellow. It transmits red and green but it holds back (or absorbs) blue light. For this reason it creates certain effects when used on a camera lens. When used to take a black and white photo, for example, a yellow filter will make the sky appear darker. This is because the yellow filter is preventing the "blue" light of the sky from reaching the film. The clouds will also be more visible because the blue of the sky surrounding them is "held back" and thus the clouds stand out against the darker sky. When used to take a color photograph, the yellow filter (which holds back blue light) acts to "correct" too much blue. For example, if there is a lot of blue in what is being shot, such as when shooting a painting where blue is very prominent, a yellow filter will tone down (correct) the blue. I=nobody has bothered to tell me why they use a yellow filter in a certain combination and in all the illustrations here sits this yellow filter.

a particular movement of Buddhism, introduced into China in the 6th century a.d. and into Japan in the 12th century, that emphasizes enlightenment by means of meditation and direct, intuitive insights. Zen Buddhists say that one finds truth in experience, not in thinking about it or listening to someone talk about experience. To understand the meaning of life, one must live, not make up theories about it.

zeppelin a rigid airship having a long, cylindrical body supported by internal gas cells. But there were twelve other methods of heavier-than-air flight—~~heavier-than-air~~; that's not ballooning or zeppelins. ~~¶~~Studying Introduction (18 June 64)

a lighter-than-air vehicle with a rigid metal frame, having a huge, long cigar-like body, equipped with bags within it containing gas to provide lift, a means to move it through the air, such as propellers, and accommodations for passengers, crew and cargo. A zeppelin works on the principle that certain gases are lighter than air and when contained within a balloon or bag will lift it upwards. By including a steering mechanism and a means to propel the balloon, passengers and cargo may be transported through the air. The zeppelin was named after German inventor Ferdinand von Zeppelin, who designed and manufactured a motorized, rigid-frame, lighter-than-air balloon in 1900. Becoming popular in the early 1900s, zeppelins were used to transport passengers to different locations and carried the crew and passengers in gondolas (cars suspended below the body of an airship or balloon which hold the passengers, instruments, etc.).

n. a lighter-than-air vehicle with a rigid metal frame, having a long cigarlike body, equipped with bags within it containing gas to provide lift, a means to move it through the air, such as propellers, and accommodations for passengers, crew and cargo. A zeppelin works on the principle that certain gases are lighter than air and when contained within a balloon or bag will lift it upwards. By including a steering mechanism and a means to propel the balloon, passengers and cargo may be transported through the air. A zeppelin maintains its shape by a light metal framework as opposed to that of a blimp, whose shape is held by the pressure of the gas inside of it and not by a rigid frame. The zeppelin was named after German inventor, Ferdinand von Zeppelin (1838–1917), who designed and manufactured a motorized, rigidframe, lighter-than-air balloon in 1900. Popular in the early 1900s, zeppelins were used for transport and carried the crew and passengers in gondolas (cars suspended below the body of an airship or balloon which hold the passengers, instruments, etc.). With the outbreak of World War I (1914–1918), zeppelins were constructed for military purposes, which included the bombing of London, England by Germany. They were also used for military purposes again during World War II (1939–1945). However, vulnerability to anti-aircraft fire, stormy weather and safety problems which led to accidents brought an end to the zeppelin's popularity.

Zimmermann telegram	a famous telegram written at the beginning of 1917 by Arthur Zimmermann, Germany's secretary of state for foreign affairs during World War I (1914–1918). The secret telegram was sent through the German ambassador in Washington, DC to the German ambassador in Mexico. It instructed him to make a proposal to the Mexican government that if the United States entered the war against Germany, Mexico should join Germany as an ally against the US, with a view to recovering their lost territory of Texas, New Mexico and Arizona. The director of British Naval Intelligence at the time, Admiral William R. Hall (1870–1943), came into possession of the telegram and turned it over to the US government without permission from the British government. On March 1, 1917 American president, Woodrow Wilson (1856–1924), let it be published in US newspapers and although Mexico remained neutral, the telegram created outrage
